

26 METRE B DOUBLE COMPLIANT VEHICLES READY FOR DELIVERY!

26 METRE B DOUBLE IS A REALITY ON OUR ROADS

VOLVO

With the 26 metre B Double legislation's emphasis on safety, requiring front under run protection and strengthened cabs, Volvo's core values of safety and quality see our current range FH & FM B Double prime movers take on the new role.

Front Under Run Protection System (FUPS) has been an integral feature since the introduction of Volvo's series II trucks and Volvo's cabs comply with the tough Swedish cab legislation.

Volvo's FUPS can be further enhanced by the addition of the Volvo Truck's Australian designed "Wild Bar". This unique bar weighs only 57kg and it's four point anchorage is not only strong but easy to install.

Operators who have longed for Volvo's comfort, safety and productivity can be assured that the world renowned series II Volvo FH & FM meet the challenge of the 26 metre B Double role.

Rather than having to wait for model compliance, Volvo Truck and Bus have in stock and ready for immediate delivery, the following range of 26 metre compliant B Double models:

- Volvo FM12 (420 to 460hp)
- Volvo FH12 (460 to 500hp)
- Volvo FH16 (550 to 610hp)
